codes written in it can be downloaded from the "Textbook Companion Project"
section at the website - <https://r.fossee.in>.

Book Description

Title: Probability and Statistics for Engineers and Scientists

Author: Ronald E. Walpole, Raymond H. Myers, Sharon L. Myers, Keying Ye

Publisher: Pearson Education, Boston USA

Edition: 9

Year: 2016

ISBN: 978-0-321-62911-1

R numbering policy used in this document and the relation to the above book.

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means an R code whose theory is explained in Section 2.3 of the book.

Contents

List of R Codes	4
1 Introduction To Statistics And Data Analysis	5
2 Probability	9
3 Random Variables And Probability Distributions	22
4 Mathematical Expectation	33
5 Some Discrete Probability Distribution	52
6 Some Continuous Probability Distributions	66
8 Fundamental Sampling Distributions And Data Descriptions	82
9 One And Two Sample Estimation Problems	90
10 One And Two Sample Tests Of Hypothesis	104
11 Simple Linear Regression And Correlation	116
12 Multiple Linear Regression And Certain Non Linear Regression Models	127
13 One Factor Experiment General	145
14 Factorial Experiments Two Or More Factors	153

15	2 to the power k Factorial Experiments and Fractions	161
16	Non Parametric Statistics	168
17	Statistical Quality Control	176
18	Bayesian Statistics	181

List of R Codes

Exa 1.2	Dotplot	5
Exa 1.3	Plot for Corrosion Data	6
Exa 1.4	Mean Variance and Standard Deviation	7
Exa 1.5	Box and Whisker Plot	7
Exa 2.2	Sample Space	9
Exa 2.3	Find Sample Space example 2	9
Exa 2.8	To find Intersection	10
Exa 2.10	To find Union	10
Exa 2.15	Generalized Multiplication Rule	11
Exa 2.18	Permutation Problem	11
Exa 2.19.a	Permutation Problem Example 19a	11
Exa 2.19.b	Permutation Problem Example 19b	12
Exa 2.19.c	Permutation Problem Example 19c	13
Exa 2.19.d	Permutation Problem Example 19d	14
Exa 2.21	Partition Problem	14
Exa 2.22	Combination Problem	15
Exa 2.24	Probability Calculation Using Formula And Law of Large Numbers	16
Exa 2.25	Probability Calculation Using Law of Large Numbers .	17
Exa 2.30	Probability Calculation Using Law of Large Numbers And Union Property	18
Exa 2.34	Conditional Probability Problem	19
Exa 2.37	Independence and Multiplicative Rule	20
Exa 2.43	Bayes Rule	20
Exa 3.8	Discrete Probability Distribution Problem	22
Exa 3.9	Discrete Probability Distribution Problem 9	23
Exa 3.10	Cumulative Distribution Function Problem	23
Exa 3.11	Probability Density Function Problem 11	24

Exa 3.12	Cumulative Distribution Function of Continuous Random Variable	25
Exa 3.14	Joint Probability Distribution of Discrete Random Variable	26
Exa 3.15	Joint Density Function of Continuous Random Variable	27
Exa 3.16	Marginal Distribution Problem	28
Exa 3.18	Conditional Distribution Of a Random Variable	29
Exa 3.20	Marginal and Conditional Densities Evaluation	30
Exa 3.22	Statistical Independent Problem	31
Exa 4.1	Expected Value Evaluation Problem 1	33
Exa 4.2	Expected Value Evaluation Problem 2	34
Exa 4.3	Expected Value of probability density function	34
Exa 4.4	Expected Value of a new Random Variable	35
Exa 4.5	Expected Value of a new Random Variable	36
Exa 4.6	Expected value of Discrete Joint Probability Distribution	36
Exa 4.7	Expected value of Joint Density Function	37
Exa 4.8	Variance Of Discrete Distribution	38
Exa 4.9	Variance using Expectation Formula	39
Exa 4.10	Mean And Variance of Continuous Random Variable .	40
Exa 4.11	Variance of a new Random variable	40
Exa 4.12	Variance of a new Random variable given the Density Function	41
Exa 4.13	Covariance of 2 Random Variables	42
Exa 4.14	Covariance Of Two Random Variables given Joint Density Function	43
Exa 4.15	Correlation Coefficient Evaluation	44
Exa 4.16	Correlation Coefficient Of 2 Random Variables Given Joint Density Function	45
Exa 4.17	Expectation Value of Linear Combination Of Random Variables	47
Exa 4.18	Expectation Value of Linear Combination Of Continuous Random Variables	48
Exa 4.19	Expectation Value of Linear Combination Of Random Variables Using Properties	48
Exa 4.20	Expectation Value Evaluation Using Properties Given a Density Function	49
Exa 4.21	Expectation Value of 2 Independent Random Variable	50
Exa 5.1	Binomial Distribution Problem	52

Exa 5.2.a	Binomial Distribution Problem	52
Exa 5.2.b.c	Binomial Distribution Problem	53
Exa 5.3	Binomial Distribution Problem 3	54
Exa 5.4	Binomial Distribution Problem 4	55
Exa 5.6	Binomial Distribution Problem 6	55
Exa 5.7	Multinomial Distribution Problem	56
Exa 5.8	Hypergeometric Distribution In Acceptance Sampling	57
Exa 5.9	Hypergeometric Distribution In Acceptance Sampling	57
Exa 5.10	Hypergeometric Probability Distribution Problem . . .	58
Exa 5.11	Mean And Variance Of Hypergeometric Experiment .	58
Exa 5.12	Relation Between Hypergeometric and Binomial Distribution	59
Exa 5.13	Multivariate Hypergeometric Distribution Problem . .	60
Exa 5.14	Negative Binomial Distribution Problem	60
Exa 5.15	Geometric Distribution Problem	61
Exa 5.16	Geometric Distribution Problem	62
Exa 5.17	Poisson Distribution Problem	62
Exa 5.18	Poisson Distribution Problem	63
Exa 5.19	Approximation of Binomial By a Poisson Distribution	64
Exa 5.20	Approximation of Binomial By a Poisson Distribution	65
Exa 6.1	Uniform Distribution Problem	66
Exa 6.2	Normal Distribution Problem	67
Exa 6.3	Find The Value of k given Normal Distribution	67
Exa 6.4	Find area under the Normal Distribution curve	68
Exa 6.5	Find the Probability given Normal Distribution	68
Exa 6.6	Using Normal Curve In Reverse	69
Exa 6.7	Applications of Normal Distribution	69
Exa 6.8	Applications of Normal Distribution	70
Exa 6.9	Applications of Normal Distribution	70
Exa 6.11	Applications of Normal Distribution	71
Exa 6.12	Applications of Normal Distribution	72
Exa 6.13	Applications of Normal Distribution	72
Exa 6.14	Applications of Normal Distribution	73
Exa 6.15	Normal Approximation To the Binomial	73
Exa 6.16	Normal Approximation To the Binomial	74
Exa 6.17	Exponential Distribution Problem	75
Exa 6.18	Gamma Distribution Problem	76
Exa 6.19	Application of Gamma Distribution	77

Exa 6.20	Application of Gamma Distribution	77
Exa 6.21	Cumulative Distribution For Exponential Distribution Problem	78
Exa 6.22	Lognormal Distribution Problem	79
Exa 6.23	Find Percentile From Lognormal Distribution	79
Exa 6.24	Weibull Distribution Problem	80
Exa 8.1	Sample Mode Evaluation	82
Exa 8.2	Sample mean and Sample Variance	83
Exa 8.4	Central Limit Theorem	83
Exa 8.5	Central limit theorem	84
Exa 8.6	Sampling Distribution of the difference of 2 means	84
Exa 8.7	The Chi squared Distribution Problem	85
Exa 8.8	The t distribution Problem	86
Exa 8.10	The t distribution Problem	87
Exa 8.11	Applications of t distribution	87
Exa 8.12	To Construct a Normal quantile quantile plot	88
Exa 9.2	Confidence Interval Evaluation	90
Exa 9.3	To Find the sample size	91
Exa 9.4	To find 95 Percent bound for mean	92
Exa 9.5	To Find 95 Percent Confidence Interval for mean	92
Exa 9.6	To Find 99 Percent Confidence Interval	93
Exa 9.7	To find 95 Percent Prediction Interval	93
Exa 9.8	To find 99 Percent prediction interval	94
Exa 9.10	Confidence Interval for the difference between 2 means	95
Exa 9.11	Confidence Interval Evaluation Using Pooled Estimate of Variance	96
Exa 9.12	Confidence Interval Evaluation For difference of 2 means when their variance is not equal and Unknown	97
Exa 9.13	To find Confidence Intervals for Paired Observations	98
Exa 9.14	Estimating a Proportion for Single Sample	98
Exa 9.15	Evaluate sample size for estimating a Proportion for Single Sample	99
Exa 9.16	Evaluate sample size for estimating a Proportion for Single Sample	100
Exa 9.18	To obtain Confidence Interval of Variance	101
Exa 9.19	To find Confidence Interval For the Ratio of 2 Variances	101
Exa 9.22	Maximum Likelihood Estimation Problem	102
Exa 10.3	Test Concerning a Single Mean for Single Sample	104

Exa 10.4	Test Concerning a Single Mean for Single Sample . . .	105
Exa 10.5	The t statistic for a test on a single mean when Variance is Unknown	106
Exa 10.6	The 2 Sample Pooled t test	107
Exa 10.7	Choice of Sample Size for Testing Mean	108
Exa 10.9	One Sample Test on a Single Proportion	109
Exa 10.10	One Sample Test on a Single Proportion	110
Exa 10.11	Two Sample Tests On 2 Proportions	111
Exa 10.12	One and Two Sample Tests Concerning Variance . . .	112
Exa 10.13	To do Hypothesis Testing for 2 variances	113
Exa 10.14	Test For Homogeneity	114
Exa 10.15	Testing for several proportion	115
Exa 11.1	To Estimate the Regression Line	116
Exa 11.2	Confidence Interval for Slope of Regression Line . . .	117
Exa 11.3	Hypothesis Testing On Slope Of Regression Line . . .	118
Exa 11.4	Confidence Interval For Intercept Of Regression Line .	119
Exa 11.5	Hypothesis Testing on Intercept of Regression line . .	120
Exa 11.6	To find the confidence interval of the mean response .	121
Exa 11.7	To Find Prediction Interval	122
Exa 11.8	Computation of Lack of Fit Sum of Squares	123
Exa 11.9	Transformation To Linear Regression Model	124
Exa 11.10	To find Correlation Coefficient	125
Exa 11.11	To do Hypothesis Testing of linear association between two variables	125
Exa 12.1	Estimation Of Equation Of Regression Line and predict values	127
Exa 12.2	To find the estimate of polynomial regression	128
Exa 12.3	Estimate the regression coefficients in polynomial model	129
Exa 12.4	Linear regression model using matrices	130
Exa 12.5	To test the hypothesis on the slope of the regression model	131
Exa 12.6	To Construct Confidence Interval for Mean Response .	134
Exa 12.7	Prediction interval Evaluation	135
Exa 12.8	To show Analysis of Variance Table for Grain Radius Data	136
Exa 12.9	To find the model for data which have 3 levels in a variable	137
Exa 12.10	To predict all possible regression lines	138

Exa 12.11	To model the data set using forward selection	139
Exa 12.12	Cp Statistic	141
Exa 12.13	Logistic regression model	143
Exa 13.1	One way ANOVA	145
Exa 13.2	One way ANOVA	146
Exa 13.3	Bartlett Test	146
Exa 13.4	Contrasts Sum Of Squares Corresponding to Orthogonal Contrasts	147
Exa 13.5	Dunnett Test	149
Exa 13.6	Randomized Complete Block Diagram	150
Exa 13.7	Random Effects Model	151
Exa 14.1	Two Factor Analysis of Variance	153
Exa 14.2	Single Degree Of Freedom Sum Of Squares	154
Exa 14.3	Evaluate Analysis of Variance table and derive conclu- sion also test on main effects	156
Exa 14.4	Anova for 3 factor experiment	157
Exa 14.5	Pooling in Multi factor Model	158
Exa 14.6	Factorial Experiments for Random Effects	159
Exa 15.1	2 squared Factorial Experiment	161
Exa 15.2	Factorial Experiment in a Regression Setting	162
Exa 15.4	Standard Errors of the least Squares Regression Coeffi- cients	163
Exa 15.6	Use a half replicate to study the effects of five factors each at 2 levels on some response	163
Exa 15.7	To construct a 2 level screening design with 6 variables containing 12 design points	165
Exa 15.8	Response Surface Analysis	165
Exa 16.1	Use sign test to test the hypothesis	168
Exa 16.2	Use Sign test to test the hypothesis	169
Exa 16.3	Use signed rank test to test the hypothesis	170
Exa 16.4	Use signed rank test to test the hypothesis	170
Exa 16.5	To perform Wilcoxin rank sum test	171
Exa 16.6	Kruskal Wallis Test	172
Exa 16.7	Runs Test	173
Exa 16.8.9	Rank Correlation Coefficient	174
Exa 17.1	Expected Value of samples required to detect the shift	176
Exa 17.2	Xbar and S chart	176
Exa 17.3	UCL and LCL for preliminary control chart value . . .	178

Exa 17.4	Find Sample Size per subgroup	179
Exa 17.5	Control Charts for Defects C chart	179
Exa 18.1	To find the Posterior probability distribution	181
Exa 18.4	Posterior Mean and Posterior Mode	182
Exa 18.6	To find 95 percent Bayesian interval	183
Exa 18.7	To find the 95 percent Bayesian interval for μ given the various parameter	184
Exa 18.8	To find Bayes estimates of p	184
Exa 18.9	To find Bayes estimates of p	185
Exa 18.11	To find Bayes estimates of p under Absolute Error loss	186

Chapter 1

Introduction To Statistics And Data Analysis

R code Exa 1.2 Dotplot

```
1 # Chapter 1
2 # Example 1.2 page no, 4 from the Pdf..
3 # To plot the Dotplot for the above data..
4 # package used "ggplot2" if not installed can be
   done using install.packages("ggplot2")
5
6 library(ggplot2)
7
8 obs <- c
   (0.32,0.53,0.28,0.37,0.47,0.43,0.36,0.42,0.38,0.43,0.26,0.43,0.47
9
10 cat <- c(rep("no_nit",10),rep("nit",10))
11
12 data1 <- data.frame(obs,cat) # making it a data
   frame.
13
14 data1$f <- factor(data1$obs) # adding another
   variable to the data frame.
```

```

15
16 # Plot..
17 ggplot(data1,aes(x = f, y = obs, fill = cat)) + geom
    _dotplot(binaxis = 'y',stackdir = 'center')

```

R code Exa 1.3 Plot for Corrosion Data

```

1 # Chapter 1
2 # Example 1.3 page no.9 from the pdf..
3 #To find the plot for the Corrosion data in example
  1.3
4 # package used "ggplot2" if not installed can be
  done using install.packages("ggplot2")
5
6
7 library(ggplot2)    # library for making visuals
8
9 humidity <- c(20,80,20,80)
10
11 average_corrosion <- c(975,350,1750,1550)
12
13 coating <- c("Uncoated","Uncoated","Chemical
  corrosion","Chemical corrosion")
14
15 a <- data.frame(coating,humidity,average_corrosion)
    #making it a dataframe
16
17 # final PLOT..
18 ggplot(data= a, aes(x= humidity,y= average_corrosion
  ,colour= coating))+geom_line() + geom_point() +
  xlab("Humidity(in %)")+ ggtitle("Corrosion
  Results for Example 1.3")

```

R code Exa 1.4 Mean Variance and Standard Deviation

```
1 # Chapter 1
2 # Example 1.4 page no. 15 from the pdf..
3 # To find the mean, sample variance, and standard
  deviation.
4
5
6 a <- c(7.00,
        7.07,7.10,6.97,7.00,7.03,7.01,7.01,6.98,7.08)
7
8 cat("The sample mean is ",mean(a))
9
10 cat("The sample variance is ",var(a))
11
12 cat("The sample standard deviation is ", sd(a))
```

R code Exa 1.5 Box and Whisker Plot

```
1
2 # Example 1.5
3 # To make Boxplot of Nicotine Data..
4 # package used ggplot2, if not installed you can
  install it using install.packages("ggplot2")
5
6
7 library(ggplot2)
8
9 nicotine <- c(1.09,1.92,2.31,1.79,
               2.28,1.74,1.47,1.97,0.85,1.24,1.58,2.03,1.70,2.17,2.55,2.11,1.86,
10
11 content <- data.frame(nicotine) #making it dataframe
  for making plots
12
```

```
13 colnames(content) <- c("content1") #changing the
    column name of the dataframe
14
15 # Final Plot..
16 ggplot(data = content, aes(x=1, y= content1))+ geom_
    boxplot(fill = "white", colour = "#3366FF")+
    coord_flip()+ylab("Nicotine Content")+ ggtitle("
    Nicotine Content in Cigarettes")
```

Chapter 2

Probability

R code Exa 2.2 Sample Space

```
1
2 # Chapter 2
3 # Example 2.2 page no. 36 from the pdf..
4 # To Find the Sample Space..
5
6 a <- c(rep("H",2),rep("T",6))
7
8 b <- c("H", "T", seq(1,6))
9
10 paste(a,b) #concatening both vectores to make a
    sample space
```

R code Exa 2.3 Find Sample Space example 2

```
1 # Chapter 2
2 # Example 2.3 page no. 37 from the pdf..
3 # to find the sample space.
4
```

```

5 a <- c(rep("D",2),rep("N",2))
6
7 b<- c("D", "N")
8
9 c <- c(rep("D",4),rep("N",4))
10
11 # final answer
12 print("The sample space is: ")
13 paste(c,rep(paste(a,rep(b)))) #merging in
    specific order to find the sample space.

```

R code Exa 2.8 To find Intersection

```

1 # Chapter 2
2 # Example 2.8 page no. 40 from the Pdf..
3 # To find the Intersection of the two sets
4
5 a <- c("a","e","i","o","u")
6
7 b <- c("l","r","s","t")
8
9 intersect(a,b) #displays the common elements in a
    and b. If there is no element common then denotes
    a vector of 0 length

```

R code Exa 2.10 To find Union

```

1
2 # Chapter 2
3 # Example 2.10 page no. 40 from the pdf..
4 # To find the Union of the given two sets
5
6 a <- c("a","b","c")

```

```

7
8 b <- c("b","c","d","e")
9
10 union(a,b) #Displays the union of two sets..

```

R code Exa 2.15 Generalized Multiplication Rule

```

1
2 # Chapter 2
3 # Example 2.15 page no. 46 from the pdf..
4 # Generalized Multiplication rule..
5
6 # answer..
7 cat("We can elect the chair and treasurer in ",22*
    21, " ways") #Using multiplication rule

```

R code Exa 2.18 Permutation Problem

```

1 # Chapter 2
2 # Example 2.18 page no. 48, from the pdf..
3 # Permutation Problem..
4
5
6 # Final answer..
7 cat("The total number of sample points is",factorial
    (25)/factorial(22))

```

R code Exa 2.19.a Permutation Problem Example 19a

```

1

```

```

2 # Chapter 2
3 # Example 2.19a page no.48 from the pdf..
4 # Permuation Problem
5 # number of ways to select president and treasurer
   from 50 students without restriction
6
7
8 cat("The number of choices of officers without
   restriction are",factorial(50)/factorial(48))
9
10
11 # It is simply permutation of 50 with 2

```

R code Exa 2.19.b Permutation Problem Example 19b

```

1 # Chapter 2
2 # example 2.19b page no. 48 from the pdf..
3 # Permuation Problem..
4
5
6 # to select the number of ways to elect president
   and treasurer from 50 people if A(a particular
   student) will serve ,if he is president
7 # 2 cases first A becomes president and in that case
8
9 cat("If A becomes president number of ways to select
   treasurer are ", 49)
10
11 a <- 49
12
13 # Second case if officers elected without A
14
15 cat("The number of possible ways to select without A
   are" ,factorial(49)/factorial(47))
16

```

```

17 b <- factorial(49)/factorial(47)
18
19 cat("The total number of ways to select the officers
    in this case are", a+b)

```

R code Exa 2.19.c Permutation Problem Example 19c

```

1
2 # Chapter 2
3 # Example 2.19c page no. 48 from the pdf..
4 # Permutation Problem..
5
6 # Number of ways to elect two officers from 50
   people if B and C (2 individuals from 50 ) will
   only work together
7 # 2 cases . First , if B and C are elected
8
9 cat("The number of ways to select B and C both from
   50 are",2) # if B treasurer and C president and
   vice versa..
10
11 a <- 2
12
13 # Second case: if B and C are not chosen so election
   done from rest 48 people.
14
15 cat("The number of selections when B and C are not
   chosen are",factorial(48)/factorial(46)) #48P2
16
17 b <- factorial(48)/factorial(46)
18
19 cat("The total number of choices in this case is",a+
   b)

```

R code Exa 2.19.d Permutation Problem Example 19d

```
1
2 # Chapter 2.
3 # Example 2.19d page no. 48 from the pdf..
4 # Permutation Problem..
5
6 # Number of ways to select officers from 50 students
   if D and E(2 individuals from 50 students) will
   not work together
7 cat("The number of choices of officers without
   restriction are",factorial(50)/factorial(48))
8
9 a <- factorial(50)/factorial(48)
10
11 cat("Number of ways in which D and E are selected
   are",2) # if D is president and E is treasurer
   and vice versa
12
13 b <- 2
14
15 cat("Number of ways in which we can choose officers
   in this case are",a-b)
```

R code Exa 2.21 Partition Problem

```
1 # Chapter 2
2 # Example 2.21 page no. 50 from the pdf..
3 # Partition Problem..
4
5
```

```

6 # number of ways, 7 students are assigned 1 triple
  and 2 double rooms..
7
8 # answer..
9 cat("The number of ways in which this partition can
  be done are", (factorial(7)/(factorial(3)*
  factorial(2)*factorial(2))))

```

R code Exa 2.22 Combination Problem

```

1
2 # Chapter 2
3 # Example 2.22 page no. 50 from the pdf..
4 # Combination Problem..
5
6 # number of ways to select 3 arcade and 2 sports
  games from 10 arcade and 5 sports game
7 cat("The number of ways to select 3 arcade from 10
  is", choose(10,3))
8
9 a <- choose(10,3)
10
11 cat("The number of ways of selecting 2 catridges
  from 5 is", choose(5,2))
12
13 b <- choose(5,2)
14
15 #using multiplication rule..
16 cat("The total number of ways of selecting 3 arcade
  and 2 sports games is", a*b)
17
18 # example 2.23 same as the above 2 questions 2.22
  and 2.21..

```

R code Exa 2.24 Probability Calculation Using Formula And Law of Large Numbers

```
1 # Chapter 2
2 # Example 2.24 page no.53 from the pdf..
3 # Probability Using Normal Method and Law of Large
  numbers..
4
5 # to find probability for atleast one head if a coin
  is tossed twice..
6
7 # "dplyr" package is used, if not installed can be

2 # Chapter 5
3 # example 5.14 page no. 159 from the pdf..
4 # Negative Binomial Distribution Problem..
5
6 # given A has 0.55 prob. of winning over B
7
8 # prob. that A will win in 6 games given that if any
   team win 4 out 7 wins then that team winner
9
10 # using negative binomial distribution we get..
11
12 cat("The probability that A will win the series in 6
   games is",dnbinom(2,4,0.55))
13
14 cat("The probability that team A will win the series
   is",pnbinom(3,4,0.55))
15 # for this atleast 4 matches to be won I can also
   use dnbinom but I have to sum all from size 4 to
   7
16
17
18 # now A and B are playing and winning series decided
   by 3 wins out of 5 games
19
20 cat("The probability that A will win the playoff is"
   ,pnbinom(2,3,0.55))
21
22 #The answer in the textbook is approximated to 4
   decimal places..

Chapter 18

Bayesian Statistics

R code Exa 18.1 To find the Posterior probability distribution

```
1
2 # Chapter 18
3 # Example 18.1 page no. 711 from the pdf..
4 # To find the posterior probability distribution..
5
6 b <- function(p,x){
7
8   choose(2,x)*p^x*(1-p)^(2-x)
9
10 }
11
12 p1 <- c(0.1,0.2)
13
14 pi <- c(0.6,0.4)
15
16 m <- c(b(0.1,0)*pi[1]+b(0.2,0)*pi[2],b(0.1,1)*pi[1]+
17       b(0.2,1)*pi[2],b(0.1,2)*pi[1]+b(0.2,2)*pi[2])
18
19 post_p1 <- c(b(0.1,0)*pi[1]/m[1],b(0.1,1)*pi[1]/m
20             [2],b(0.1,2)*pi[1]/m[3])
```

```

20 post_p2 <- c(1,1,1)-post_p1
21
22 cat("The posterior for p=0.1 given x is",post_p1,"x
    ranges from 0 to 2")
23
24 cat("The posterior for p=0.2 given x is",post_p2,"x
    ranges from 0 to 2")

```

R code Exa 18.4 Posterior Mean and Posterior Mode

```

1
2 # Chapter 18
3 # Example 18.4 page no. 713 from the pdf..
4 # Posterior Mean and Posterior Mode..
5
6 # Note – Example 18.2 and 18.3 are theoretical with
    nothing to compute..
7
8 # given a distribution as on example 18.2 on page no
    . 712 of pdf
9 # to find the posterior mean and mode when x=1
10
11 # the posterior distribution function for 0<p<1
12 # package used "polynom"
13
14 install.packages("polynom")
15 library(polynom)
16
17 a <- function(x,p){
18
19     3*choose(2,x)*(p^x)*((1-p)^(2-x))
20
21 }
22
23 cat("The posterior mean when x=1 is",integrate(

```

```

      function(b){b*a(1,b)},0,1)$value)
24
25 a <- polynomial(coef = c(0,6,-6))
26
27 b <- deriv(a)
28
29 cat("The posterior mode at x=1 occurs at p equal to"
      ,Re(polyroot(b)))

```

R code Exa 18.6 To find 95 percent Bayesian interval

```

1
2 # Chapter 18
3 # example 18.6 page no. 715 from the pdf..
4 # to find 95% bayesian interval
5
6 # Note – Example 18.5 is theoretical with nothing to
  compute..
7
8 # given prior distribution uniform , for 0<p<1
9 # refer example 18.2 on page no.712
10
11 # from example 18.2 we can see that at x=0 the
  posterior distribution is  $3(1-p)^2$ 
12 # package "polynom" is used, if not installed can be
  done using install.packages("polynom")
13
14 library(polynom)
15
16 a <- polynomial(coef = c(3,-6,3))
17
18 b <- polynomial(c(1,-3,3,-1)) - 0.025
19
20 c <- integral(a)-0.025
21

```

```
22 cat("The 95% bayesian interval is",polyroot(c)[1],"
    and",polyroot(b)[1])
```

R code Exa 18.7 To find the 95 percent Bayesian interval for mu given the various parameter

```
1
2 # Chapter 18
3 # example 18.7 page no. 716, from the pdf..
4 # to find the 95% bayesian interval for mu..given
  the various parameters.
5
6 mu_o <- 800
7
8 sig_o <- 10
9
10 n <- 25
11
12 sig <- 100
13
14 x <- 780
15
16 mu <- (n*x*sig_o^2 + mu_o*sig^2)/(n*sig_o^2+sig^2)
17
18 sd <- sig_o*sig/sqrt(n*sig_o^2+sig^2)
19
20 cat("The 95% Bayesian interval for mu is given by",
    mu+qnorm(0.025)*sd," to",mu-qnorm(0.025)*sd)
```

R code Exa 18.8 To find Bayes estimates of p

```
1
2 # Chapter 18
```

```

3 # example 18.8 page no.717 from the pdf..
4 # to find bayes estimates of p, for all values of x
  in example 18.1
5
6 # refer example 18.1..
7
8 b <- function(p,x){
9
10   choose(2,x)*p^x*(1-p)^(2-x)
11
12 }
13
14 p1 <- c(0.1,0.2)
15
16 pi <- c(0.6,0.4)
17
18 m <- c(b(0.1,0)*pi[1]+b(0.2,0)*pi[2],b(0.1,1)*pi[1]+
  b(0.2,1)*pi[2],b(0.1,2)*pi[1]+b(0.2,2)*pi[2])
19
20 post_p1 <- c(b(0.1,0)*pi[1]/m[1],b(0.1,1)*pi[1]/m
  [2],b(0.1,2)*pi[1]/m[3])
21
22 post_p2 <- c(1,1,1)-post_p1
23
24 cat("The bayes estimate of p for x = 0 is",p1[1]*
  post_p1[1]+p1[2]*post_p2[1])
25
